Pred. No. is the number of results predicted by chance to have a

score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

It may be shorter because we only sequence overlapping clone sections once, or longer because we provide a small overlap between neighboring data submissions.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      ne actual start of actual end is at

```
This sequence was finished as follows unless otherwise noted: all regions were double stranded, sequenced with an alternate chemistry, or covered by high quality data (i.e., phred quality >= 30); an attempt was made to resolve all sequencing problems, such as compressions and repeats; all regions were covered by at least one plasmid subclone or more than one M13 subclone; and the assembly was confirmed by restriction digest.
                                                                                                                                                       platzer, M.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Neighboring sequence information:
This entry is part of a larger genomic contig. The start of this sequence is directed towards the centronere. The end (31818. .320187) of this sequence overlaps with the start of Acc number AF049895. It covers RGP-64M4, SCb-282k6, SCb-273G1 entirely and is overlapped by SCb-296N11, SCb-316M22.

This entry has been annotated with sequence quality estimates computed by the Phrap assembly program.
All manually edited bases have been reduced to quality zero. Quality levels above 40 are expected to have less than 1 error in 10,000 bp.
Base-by-base quality values are not generally visible from the GenBank flat file format but are available as part of this entry's ASN.1 file.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Dye;

* sequencing reads that have not been assembled into contigs. Runs of N are used to separate the reads and the order in which they appear is completely arbitrary. Low-pass sequence sampling is useful for identifying clones that may be gene-rich and allows overlap relationships among clones to be deduced. * However, it should not be assumed that this clone * will be sequenced to completion. In the event that the record is updated, the accession number will be preserved.

AAC77607 to AAC78448 encode the human cancer associated proteins given in AAB43398 to AAB4239. The proteins can have activities based on the tissues and cells the genes are expressed in. Example of activities

```
sapiens.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          EP1201765-A2

include: cytostatic; proliferative; vulnerary; immunomodulator;
antidiabetic; antiasthmatic; antirheumatic; antiarthritic;
antinflammatory; antithyroid; antialrayic; antibacterial; antiviral;
cermatological; neuroprotective; cardiant; thrombolytic; coagulant;
cootropic; vasotropic; antipsoriatic and antiangiogenic. The
cootropic; vasotropic; antipsoriatic and antiangiogenic. The
polynucleotides and polypeptides can be used for preventing, treating or
ameliorating medical conditions and diagnosing pathological conditions.
CP Polynucleotides, polypeptides, antibodies, agonists and antagonists from
the present invention may be used to treat immune disorders by activating
cc inhibiting the proliferation, differentiation or mobilisation of
immune cells, to treat disorders of haematopoietic cells, autoimmune
cdisorders, allergic reactions, graft versus host disease and organ
cejection, modulate haemostatic or thrombolytic activity, modulate
cc inflammation, cancers, cardiovascular disorders, neurological disease and
characterial or viral infections. The peptides, nucleotides, antibodies,
cc AACTBAST and AABA4240 represent sequences used in the exemplification of
the present invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                AAATITACTICAAAATAAAAGCAIGTAAGTGACTGITITITCAAGAAGAAATGIGITITCAT 1050

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         1579
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  1639
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        1699
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        1760 CAPACAAATGGGTCTTCAGCCTTACCCGGAAATACTTGTGGTTTCTAGATCACCATCTTT 1819
                                                                                                                                                                                                                                 The present invention relates to a new method for identifying compounds for treating and/or preventing cytomegalovirus (CWV) infection and/or related diseases. The method of the invention comprises contacting a test compound with at least one of the cellular kinases RICK, RIP, Nck-Interacting kinase, MKK3 and SRRK-2 and detecting any change in kinase activity. The method of the invention can be used to treat and/or prevent CW infections and related diseases. Oligomucleotides that can detect the specified kinases can also be used for diagnosis of infection. The present uncleic acid sequence encodes the human cellular kinase RICK
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                450
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       510

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 990
                                                                                                                                                                                    New antisense oligonucleotide that targets regions of a nucleic acid encoding human receptor interacting protein (RIP)2, for treating diseases associated with RIP2 expression.
                                                                                                                                                                                                                                                                                The invention relates to antisense compounds targetted to a nucleic acid encoding human receptor interacting protein (RIP)2 to inhibit its expression. Antisense compounds are used for treating diseases associated with RIP2 expression. They are also useful in antisense gene therapy. The present sequence is human RIP2 DNA
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 450

                                                                                                                                                                                                                                                                                                                                      This sequence encodes the human RICK (RIP-like interacting CLARP kinase)

C f apoptosis, potentiating apoptosis induced by caspase-8 and caspase-10

during CD95 signalling. The invention provides methods for identifying

apoptosis signalling pathway inhibitors and activators, and methods and

c compositions for screening compounds which will modulate the interactions

CC compositions for screening compositions identified: ARC, RICK, and the CIDB family of

activators (CIDE-A, CIDE-B and DREP-1). RICK is useful in screening

CC assays for agents, useful in the diagnosis, prognosis or treatment of

cisease associated with excess cell growth and dysregulation of

cassays for agents, useful in the diagnosis, prognosis or treatment of

cisease associated with excess cell growth and dysregulation of

confloative complexes containing RICK and CLARP can be used in drug

creening assays to identify inhibitors molecules blocking CD95-mediated

confloatification of ARC-like inhibitory compounds may be useful for gene

confloatification of ARC-like inhibitory compositions of CIDEs can be used to

cherapy treatment of disease with increased cell death in muscle tissue

confloatification of ARC-like inhibitory compositions of CIDEs can be used to

create e.g. cancer, AIDS, neurodegenerative disease. AntiRICK antibodies

can be used as reagents for the preparation or affinity chromatography

cc media, and for diagnostically measuring RICK levels. A specific inhibitor

confloation with intracellular factors such as CLARP and FADD appears to

confloation with intracellular factors such as CLARP and FADD appears

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         AAZ46138-Z46168 encode human phosphorylation effectors (PHSP), designated PHSP1.PHSP31 (the protein sequence for PHSP28 is not given in the specification). The sequences were isolated from cDNA libraries prepared from various human tissues. The PHSP proteins are useful for the diagnosis, treatment and prevention of proliferative disorders, immune disorders and neuronal disorders. The PHSP proteins form pharmaceutical compositions which useful for treating or preventing disorders associated with decreased PHSP expression/activity. PHSP antagonists are useful for treating or preventing disorders associated with increased PHSP
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           TGAAAATAGTGGTTCTCCTGAAACTTCAAGGTCCCTGCCAGCTCCTCAAGACAATGATTT 1317

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          1754 CAAACAAATGGGTCTTCAGCCTTACCCGGAAATACTTGTGGTTTCTAGATCACCATCTTT 1813
                                                                                                                                               The invention relates to primers for synthesising full length cDNA clones 810 cDNA molecules encoding a human protein have been isolated and nucleotide sequences of 5' and 3' ends of the cDNA molecules have been determined. Primers for synthesising the full length cDNA are useful for clarifying the function of the protein encoded by the cDNA. The full length clones were obtained by construction of full length enriched cDNA libraries that were synthesised by the oligo-capping method. The primers enable the production of the full length cDNA easily without any special methods. The present sequence is a full length human cDNA of the invention. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in CD-ROM format directly
                                                                                                                                                                                                                                                                                                                                                                                                                      390
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              810

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             390
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       New B1 protein regulates cell death and cell survival pathways -derivatives, DNA and antibodies, also regulate intracellular inflammation ; for treating AIDS, cancer.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         This invention describes the isolation of a novel human B1 protein which can interact with, intracellular mediators or modulators of inflammation, cell death and/or cell survival pathways, directly or indirectly. Cells can be modulated or mediated in inflammation, cell death or cell survival pathways or another intracellular signalling activity using B1. Conditions such as AIDS and cancer can be treated using B1. Antibodies, oligonucleotides and ribozymes can also be used to regulate the above
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             B1 protein; intracellular mediator; modulator; inflammation; cell death; cell survival pathway; intracellular signalling; AIDS; cancer; human; ss.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The invention relates to a novel isolated polypeptide which is a human kinase and phosphatase (KPP). The KPP polypeptides, polymuclectides, agonists and antagonists are useful for diagnosing, treating or preventing cell proliferative disorders such as atherosclerosis, cirrhosis, hepatitis and cancer, developmental disorders e.g. mental retardation, neurological disorders including Alzheimer's disease and Parkinson's disease, autoimmune and inflammatory disorders such as Crohn's disease, autoimmune and inflammatory disorders such as fungal, parasitic, protozoan or helminthic infections. Furthermore, tholynucleotides encoding KPP may be useful for creating transgenic animals to model human disease, as well as during gene therapy of the mand inflammatory of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the co

This invention describes the isolation of novel human caspase recruitment domain, CARD-3 and CARD-4 polynucleotides and proteins and a partial carried commain, CARD-4 protein and genes. The genes and proteins of the invention are involved in the regulation of caspase activation. The caspase criminal carried in the regulation of caspase activation. The caspase activation and the regulation of caspase activation. The caspase activates and antibodies can be used in screening assays, detection assays, predictive methods may be used to diagnose and treat patients which are suffering from a disorder associated with abnormal level or rate of apoptotic cell death, abnormal activity of the TMF receptor complex, or abnormal activity of a caspase. Complex associated with abnormal activity of a caspase. Component activity of the TMF receptor complex, or abnormal activity of a caspase. Diseases that may be treated include cancer (particularly follicular lymphoma, carcinomas associated with mutations in p53 and hormone-cappendent tumours), autoimmune disorders (e.g. systemic lugus carpendent tumours), autoimmune disorders (e.g. systemic lateral sclerosis, arthematosis, immune-mediated glomerulonephritis), viral infections, also parkinson's disease, amyorcaphic lateral sclerosis, retinitis pigmentosa, spinal muscular dystrophy, cerebellar degeneration, anaemia, myelodysplastic syndrome, myocardial infarction, and stroke. CARD-3 protein interacts with other cellular proteins, and so can be used for survival. The CARD proteins may also be used to for screen drugs or compounds which modulate their activity. The CARD-4 gene can express a long transcript that encodes CARD-41, and GARD-42. This sequence compounds which modulate activity. The CARD-4 and CARD-42. This sequence compounds which madulate their activity. The CARD-4 and cARD-42. This sequence compounds which modulate their activity and card of the invention and condess the human CARD-3 protein described in the method of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  1149 AAAGTTACAGAGTGTTTCAAGTGCCATTCACCTATGTGACAAGAAGAAAATGGAATTATC 1208

The present sequence is that of cDNA encoding human caspase recruitment domain 3 (CARD-3, see AAB20079). The CDNA was isolated following a database search using known CARD sequences. Plasmid pxE17A containing CARD-3 cDNA is deposited as ATCC 203037. CARD-3 is an intracellular protein predicted to be involved in regulating caspase activation. It is useful as a modulating agent in regulating callular processes include cell growth and cell death. Methods of diagnosing and treating patients suffering from a disorder associated with an abnormal level or rate of apoptotic cell death, abnormal activity of the Fas/ADO-1 receptor complex, complex, abnormal activity of the tumour necrosis factor receptor complex or abnormal activity of the tumour necrosis factor receptor complex or abnormal activity of the tumour necrosis factor receptor complex or abnormal activity of the cumour administering a compound that modulates the expression or activity of CARD-3, CARD-4, CARD-5 or CARD-6 e.g. a small molecule, antisense nucleic acid, ribozyme or polypeptide. Such disorders include cancer, viral infection, autoimmune disorders, neurological diseases, haematological disorders, inflammatory disorders and immune disorders. CARD nucleic acids can be used to express CARD proteins in a host cell e.g. for gene therapy applications, to detect a genetic lesion and to modulate CARD activity
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               1628
